## SUMMARY

Senior QA Engineer with 5+ years of experience delivering end-to-end Software Quality Assurance across Web, Mobile (iOS & Android), API, and enterprise systems for Tier-1 Indonesian banks, fintech, capital markets, and multi-product environments. Specialized in building automation frameworks from scratch using Selenium (Java + TestNG), Playwright (Python, async, Page Object Model), Katalon Studio, Cypress, and Appium — with CI/CD integration on GitHub Actions and Azure DevOps, plus Allure and ExtentReports for professional reporting. Experienced with banking-grade API testing including Bank Indonesia SNAP (Standar Nasional Open API Pembayaran), multi-layer cryptographic signature validation (RSA SHA-256, HMAC-SHA512, SHA-256 body hashing), load testing (JMeter, K6, Artillery), and Agile/Scrum delivery with MVP-based release cadence. Proven ability to lead QA initiatives, mentor junior engineers, and bridge engineering and product teams to deliver high-quality, production-ready systems.

## EXPERIENCE

### Senior QA Engineer

Noovoleum — Jakarta, Indonesia | Dec 2025 – Present

- Owned end-to-end QA lifecycle as **sole QA engineer for UCO Collect** — a multi-region application (Indonesia, Thailand, Singapore) covering Web Dashboard (internal & partner), Mobile (Android & iOS), and Backend API across Dev, QA, Staging, and Production environments.
- Built automation suite from scratch using **Playwright (Python, async, Page Object Model)** with CI/CD integration on GitHub Actions and Allure reporting, scaling to **300+ test cases** across API, Web, and Mobile; resolved Android emulator instability on CI by tuning API level and resource allocation.
- Delivered partner integration automation for Alfragift and Pertamina Partner WebApp flows; authored full regression test plan covering positive, negative, and fresh-install scenarios across IDN/TH/SG regions.
- Applied **Test-Driven Development (TDD)** principles with developers to improve early defect detection; executed Load Testing with K6 and JMeter on critical API endpoints.
- Led API testing initiatives using Postman and Apidog with mock/Faker data and multi-environment validation; served as primary QA liaison between developers and stakeholders, producing high-quality bug reports to drive release readiness.

### Lead QA Engineer

PT Ikonsultan Inovatama — Jakarta, Indonesia | Jul 2024 – Nov 2025

- Led QA as dedicated Lead QA Engineer for a **Tier-1 Indonesian Bank's enterprise sales force automation platform** — a Salesforce-based system serving relationship managers and personal bankers handling premier banking customers.
- Managed and mentored a team of **5 junior QA engineers** within the same project, establishing structured QA standards, automation patterns, and bug-reporting rigor.
- Delivered QA across multiple MVP releases covering Customer 360, customer propensity modeling, contact directory, campaign management, user access management (UAM), notifications, and permission matrix modules.
- Built **enterprise web automation framework using Selenium with Java and TestNG**, integrated with **Azure DevOps CI/CD pipelines** and ExtentReports for executive-ready reporting; extended coverage to mobile via Appium.
- Handled dual-domain testing across user-facing sales force tooling and a downstream Data Science Analytics & Reporting (DSAR) platform — covering frontend, integration, and data accuracy validation.
- Performed regression, sanity, and smoke testing with **banking-grade SIT documentation** (sign-off workflow, severity classification, hash-check integrity validation); **identified and prevented 2 Critical force-close bugs** and a baseline data-sync production issue before go-live.
- Practiced Agile/Scrum with MVP-based release cadence across multi-sprint iterations (Sprints 1–4 per MVP), collaborating cross-functionally with the bank's internal QA team, Salesforce frontend, Backend Node.js, Backend Java, and DSAR engineering teams.

## QA Engineer

PT Moonlay Technology — Jakarta, Indonesia | Mar 2023 – Jun 2024

- Delivered QA for **6+ simultaneous enterprise projects** across Tier-1 banking, capital markets, and distribution domains — including Bank Indonesia SNAP-compliant API integrations, mobile micro-lending platforms, banking AI virtual assistant validation, ERP order management, and capital market reporting systems.
- Engineered API automation for **Bank Indonesia SNAP (Standar Nasional Open API Pembayaran)-compliant payment APIs** covering Balance Inquiry, SKNBI Transfer, RTGS Transfer, and Direct Debit endpoints — implementing reusable **multi-layer signature utilities in Groovy** (RSA SHA-256 for token authentication, SHA-256 body hashing, HMAC-SHA512 transaction signing) as Katalon Studio keywords.
- Designed data-driven test suites covering **20+ scenarios per endpoint** across HTTP status codes 200, 400, 401, 403, 404, 409, 500, and 504, with Excel-based scenario binding.
- Built mobile automation suites for a **consumer credit-limit product and an Ultra-Micro lending product** using Katalon Studio + Appium — including custom reusable mobile keywords, covering **65+ test scripts** across Apply, Notification, Transaction History, and end-to-end flows.
- Validated a banking AI virtual assistant's response variation and greeting detection, ensuring outputs remain within curated response datasets across multiple time-based contexts.
- Executed **Performance and Load Testing for an enterprise Order Management System** using Artillery.io with **126 YAML scenarios targeting up to 1,200 concurrent users**; complemented with functional API testing via Postman across Sales Order and Delivery Order endpoints.
- Delivered web automation for a **national capital market Centralized Trading Platform's reporting module** (Pelaporan Transaksi Efek) using Katalon Studio + Groovy — covering Securities Mapping, Custodian Master, KSEI Settlement, and EBUS (Efek Berbasis Utang dan Sukuk) reporting flows under OJK compliance.
- Increased automation coverage to **~70%**; identified and prevented **50+ critical defects** pre-release; architected structured QA documentation practices adopted across the team.

## QA Engineer

PT Qoin Digital Indonesia — Jakarta, Indonesia | Feb 2022 – Mar 2023

- Delivered QA for **Bank Indonesia-licensed e-Wallet and multi-chain crypto wallet products** under BI's e-Wallet regulatory framework.
- Owned testing for the **Access Manager module** — a multi-tenant enterprise Identity & Access Management (IAM) system with **84 API endpoints across 9 functional domains**: Authentication, User Management, Role & Permission (RBAC), Client Management, Profile, PIN/Password lifecycle, OTP & Verification, Device Management, and KYC Account Upgrade.
- Leveraged Katalon Studio for full-stack testing across Web (admin portal), Mobile (end-user app), and API layers within a single framework — covering Dev, Staging, and Production-adjacent environments.
- Executed **mass simulation testing for a multi-chain crypto wallet (Solana and Binance Smart Chain integrated)** across 4 coordinated sessions with a team of **15-20 concurrent testers** — systematically identifying and reporting reproducible transaction-flow defects.
- Improved product reliability by **reducing post-release defects by ~30%**; enhanced bug tracking clarity and accelerated issue resolution across QA and development teams.

## QA Engineer

PT Avows Technology — Jakarta, Indonesia | Jul 2021 – Feb 2022

- Delivered QA for enhancement projects on a **national pawn-broking lender's core lending platform** — covering gold-savings products and Sharia-compliant lending products deployed across thousands of outlets nationwide.
- Conducted functional testing, parameter-driven business rule validation, and transaction journal verification to ensure financial accuracy and regulatory compliance with Bank Indonesia standards.
- Performed multi-channel integration testing across conventional, Sharia, mobile customer app, and Loan Origination System (LOS) platforms.
- Collaborated onsite with the client's internal teams (Business Analyst, Core Developer, Product Owner); authored test scenarios, test reports, and technical documentation supporting system validation and change management processes.

## Desktop Support Engineer

PT Berca Hardaya Perkasa — Jakarta, Indonesia | Jan 2021 – Jun 2021

- Maintained **95%+ first-call resolution rate** by diagnosing and resolving end-user technical issues efficiently; supported IT infrastructure including hardware, networking, and system setup.

## QA Manual Engineer

PT Whiteopen Teknologi — Jakarta, Indonesia | Jan 2020 – Dec 2020

- Delivered onsite manual QA for a **national automotive manufacturer's enterprise Quality Testing platform** (Phase 2) — covering **35+ application modules** across Quality Measurement, Calibration, Laboratorium, and Part Approval Process (PAP) for the client's Quality Testing division.
- Served as **PIC (Person in Charge) for Go-Live readiness validation** across three critical components: Role-User access matrix, Master Lookup (**1,000+ reference queries**), and Master Forms & Apps inventory; successfully went live in December 2020.
- Executed functional, workflow, and data integrity testing across multi-tier approval flows (Requestor → Coordinator → Dept Head), role-based authorization scenarios, and master data validation; participated in SIT cycles covering functional defects, UI/UX enhancements, and business rule validation.

## TECHNICAL SKILLS

---

**Core QA Expertise:** Test Strategy & Planning, Risk-based Testing, Test-Driven Development (TDD), Test Case Design & Execution, Regression / Sanity / Smoke Testing, Functional, Integration, E2E Testing, SIT (System Integration Testing), UAT Support, Defect Analysis & Root Cause Analysis

**Web & Mobile Automation:** Selenium (Java + TestNG), Playwright (Python, async, Page Object Model), Cypress, Katalon Studio (Groovy), Appium (iOS & Android)

**API Testing:** REST API Testing, Postman, Newman, Apidog, API Automation & Validation, JSON Schema Validation, Bearer Token / JWT Authentication, multi-layer Signature Validation (RSA SHA-256, HMAC-SHA512, SHA-256 body hashing)

**Performance & Load Testing:** JMeter, K6, Artillery.io, Load Testing, Stress Testing, Concurrent User Simulation

**CI/CD & Reporting:** GitHub Actions, Azure DevOps Pipelines, Jenkins (basic), Allure Reporting, ExtentReports, Git-based workflows

**Process & Tools:** SDLC / STLC, Agile / Scrum, MVP-based Release Cadence, Sprint Ceremonies, Git, GitHub, Azure DevOps, JIRA, Confluence

**Programming:** Python, Java, JavaScript, Groovy

**Platforms:** Web, iOS & Android (native), Flutter, Desktop, Enterprise Salesforce-based systems

**Domain Exposure:** Tier-1 Indonesian Banking, Bank Indonesia SNAP API, Capital Markets (national reporting platforms, EBUS), E-Wallet & Multi-Chain Crypto Wallet, Micro-Lending, Enterprise Quality Testing, Order Management & Distribution

## LANGUAGES

---

Indonesian (Native) • English (Professional Working Proficiency)

## EDUCATION

---

**Bachelor of Informatics Engineering — In Progress**

Universitas Pelita Bangsa — Bekasi, Indonesia | 2024 – Expected 2028

## CERTIFICATIONS & TRAINING

---

- QA Bootcamp — Software Quality Assurance
- Selenium Automation Testing
- Cypress End-to-End Testing
- JMeter Performance Testing
- Postman API Testing
- Katalon Studio Automation
